CONTENT AND RESULTS

Purpose and context

The Vulture Regional Park It represents an ideal and privileged design yard for experimenting with an ecological conversion of socio-territorial models and, at the same time, it provides a significant scientific challenge for the study of a Rural and Cre- activity Living Lab, enhanced through a place-based and people-oriented approach.

Problems and challenges

Organizing, Supporting and Funding Entities

Process (including participant recruitment & selection) and Interaction/Participation (including methods/tools) used

The Living Lab sees the involvement of the Federico II University of Naples through the Interdepartmental Research Centre L.U.P.T. (Laboratory of Urbanism and Territorial Planning). The case of implementation of a Living Lab in the Vulture Park sees the integration of the themes of territorial planning with that of rural development to create a space for experimentation, research and action regarding the theme of territorial regeneration.

Outcomes, Effects and Lessons Learned

The area's resources' value and potential must be considered an engine for sustainable development and quality of life in a changing society. At the same time, the living lab approach encourages the unconventional mixing and matching of disparate research areas, where researchers, students, decision-makers, community members and stakeholders can work together within a collaborative dimension.
